

## Making your data work for you

Our Data Analytics software, P-DA, generates significant measurable revenue and optimises performance across all energy and non-commodity charging processes. Our settlements and reporting tool rebuilds your industry and customer data to enable complete and accurate analysis.

**BENEFITS**  
OUR CLIENTS' HAVE SEEN INCLUDE:

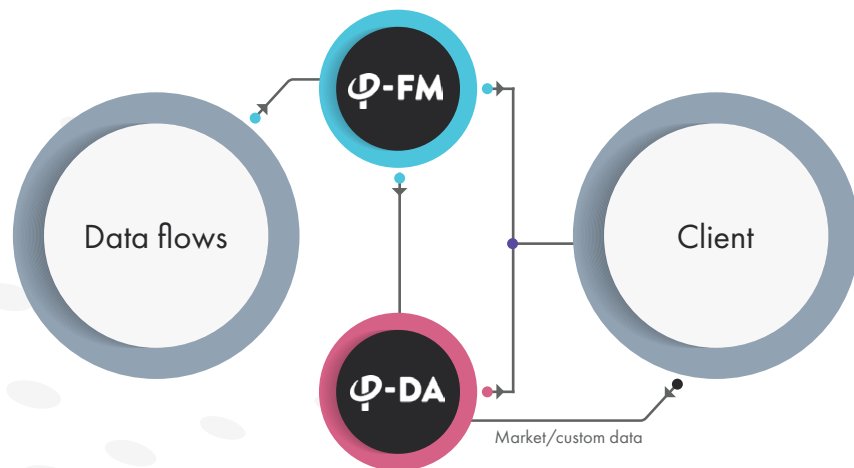

**£50m**  
IMPROVEMENT IN SETTLEMENT POSITION

**+7%**  
INCREASE IN SF SETTLEMENT PERFORMANCE

**-35%**  
REDUCTION IN METERING EXCEPTION CASES

P-DA combines all of the information available through your data flows with the varied and complex market domain data that is applicable for your business to provide insights into your business performance that will enable true value to be achieved.

Data Analytics works with Flow Manager for optimum data analysis. Market data and custom client data can also be fed into Data Analytics to generate further targeted analysis.

### Bespoke client solutions

P-DA includes a vast range of analytical outputs as standard but is purpose made for customisation. This allows you to carry out tailor made analysis to give you the information you need to understand and/or operate your business.

Custom use examples include:

- Bespoke billing functions for unique contracts that fall outside of core systems.
- Cashflow forecasting and accounting.
- Cost forecasting and invoice validation for metering agents, brokers and industry charges.
