

Manage complex flows with ease

Your connection to all industry flows and internal data, converting billions of data items into one database with unrestricted access. Our Flow Manager software, P-FM, is the foundation for all Phidex data processing functions; cataloguing and making available all industry data flows for registrations, metering, reads and settlements.

THOUSANDS OF FLOWS – MILLIONS OF RECORDS – BILLIONS OF DATA ITEMS
ONE DATABASE WITH UNRESTRICTED ACCESS

P-FM support

Our software developers can create import routines for any additional internal data reports, irrespective of its source structure.

The staged approach to managing data files and intuitive user interface provides the confidence that all data presented to it is effectively managed and available for further reporting and analytics.

Software integration

While our software modules have been designed to work seamlessly together, any of our modules may be purchased separately and integrated with other systems.
